## FOREWORD

"You cannot get through a single day without having an impact on the world around you. What you do makes a difference and you have to decide what kind of a difference you want to make." – Jane Goodall

We are extremely grateful and proud of our International Coastal Clean-Up Day (ICC 2020) volunteers in Malaysia who decided to step up and make a difference for our environment. Besides cleaning up our beaches and seas, together we raised awareness on the gravity of the marine litter issue, especially plastic pollution. From the data contributed throughout the month of September clean-ups, plastic items remain the top polluters. Plastics have been consistently the top items found during ICC since Reef Check Malaysia (RCM) started coordinating nationwide clean-up efforts in 2018.

To address the issue of marine debris, we need a concerted, multi-pronged effort from various stakeholders. We simply cannot keep cleaning up our beaches and oceans, we must prevent waste from escaping or leaking into our environment in the first place. It will require commitments from all levels of government, producers, manufacturers, brand owners, waste management companies, recyclers, community leaders, schools, and really, everyone to change their habits and behaviour. RCM is hopeful that littering will one day be something of the past, but we also understand that changes cannot happen overnight. As long as we are taking small steps in the right direction, our oceans and marine life will stand a chance.

#### THERESA NG RCM PROGRAMME DEVELOPMENT MANAGER

## **ABOUT ICC**

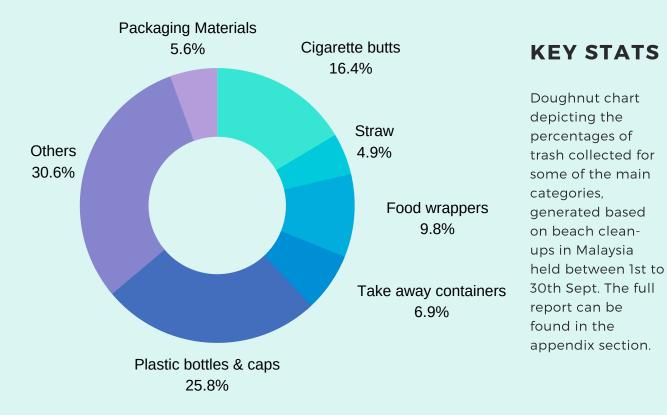

BY BRYAN FOO

In September every year, thousands of people around the world participate in beach cleanups in conjunction with International Coastal Clean-up Day (ICC). This global movement began over 30 years ago, and Reef Check Malaysia (RCM) plays a pioneering role in coordinating ICC clean-ups in Malaysia as one of our many awareness programmes.

Established in 2007, Reef Check Malaysia (RCM) is a non-profit organization working towards sustainable management of coral reefs in Malaysia by collaborating with multiple stakeholders. This year, the official date of ICC falls on the 19th September. Despite having our efforts and operations limited by Covid-19, RCM managed to coordinate 70 beach clean-ups across 11 states in Malaysia in September.

"This nationwide event saw close to 3,500 volunteers extracting more than 11 tonnes of trash from over 200km stretch of coastlines."

Social distancing SOPs and proper PPE were made necessary for all the beach clean-ups. A series of online activities were put together this year as part of the 'Join ICC Campaign from Home' package this year for those who prefer to stay indoors.

### DATA COLLECTION

The primary mode of data collection is via the Clean Swell app, a free mobile application designed to capture volunteer clean-up efforts by enabling them to track the location, types & weight of trash collected and other crucial information.

The data submitted via Clean Swell will be instantaneously uploaded to Ocean Conservancy's global ocean trash database which is easily accessible by anyone via https://www.coastalcleanupdata.org.

Top 6 types of trash collected in ICC Season and the cumulative number of items

## 75%

#### At least three-quarter of trash collected accounts for plastic alone

# 16%

The percentage of the total trash collected for cigarette butts, making it one of the top items

## WHY ICC?

International Coastal Clean-up Day (ICC) has become one of the main projects of RCM undertake every year. It is in-line with our goal of "No more beach clean-ups in 10 years".

By physically removing trash from our beaches, we are directly improving the health of the marine ecosystem by keeping debris and toxic chemicals out of the ocean. Perhaps the most significant impact of beach clean-ups lies in the empowerment of communities and awareness on ocean pollution. Malaysia ranks amongst the top Asian countries in plastic pollution and nothing compares to experiencing this dire situation first-hand through a clean-up event. Volunteers will then go on and educate and inspire those around about ways to tackle marine debris, forming a powerful positive feedback loop. Data collected from beach clean-ups play an important role too. These data deliver a global snapshot of ocean trash, providing researchers, policymakers and us the insight needed to inform solutions.

It is our responsibility to protect the ocean from any further anthropogenic destruction and turn the tide against marine debris. We believe our oceans can be saved, if we continue our efforts in empowering and educating people, one clean-up at a time.
